

ROOM 202

Mrs. Severe and Ms. Delange

Parts of a Plant

Students have been learning about the parts of a plant: roots, branches, stem, and leaves. We were hoping to make a "Parts of the Plant Salad" this Friday; however, we will have to change the date that we are making our salad to next **Friday, Sept. 11, 2015**. Each child may bring something to contribute to the salad that is a part of the plant that we can eat. Students will be able to share with the class what they brought and each student will help wash, peel, and cut the food. Parents are welcome to help during this activity. Please let me know if you are able to come and help.

There was paperwork that was sent home with some students last week. Please make sure to complete these forms and return them as soon as possible to school with your student.

Most work is completed in the classroom with manipulatives; however, it is always beneficial for students to read at home. Another activity that you could do with your student at home is to practice math facts.

Students work on their math facts during class, but some extra practice at home can help them memorize those facts.

You may contact me anytime by email or phone with questions, comments or concerns. My information is listed at the bottom of this page. There is also a Wiki address listed. This is our class page where I will post frequently used links and pictures of what we are doing in class. Please take a moment to look at the "Class Happenings" on the Wiki.
